|  |  | <p>17. Who is the lead person to contact about projects of this nature?</p> <p>Data Warehouse</p> <p>18. There are three main architecture patterns for delivering a Shared Care Record to share data. Please identify the Hospital's chosen option:</p> <p>a. Centralised Model – Data is stored in a centralised, consolidated data repository. Data shared by HIE participants is normalised, housed in, and accessed from a central data repository.</p> <p>b. Federated Model (also known as Distributed Model) – Data is held at source in a decentralised manner. Each participant maintains separate control of its data, typically in special “edge servers” at its own location, and shares patient-specific data upon request from other HIE participants.</p> <p>c. Hybrid Model – A combination of a &amp; b. Builds on the Federated Model by adding a “record locator service” that tracks where patients have received care and where their source data can be requested.</p> <p>19. Does the Hospital currently have a data repository for the above requirement if selecting b or c?</p> <p>20. If yes, is it FHIR-based?</p> <p>21. What is the name of the product?</p> |  |
